

## Features

- Operating voltage: 2.2-5.5V
- Standby current: 10uA/3.0V
- Power-On Reset (POR)
- Low Voltage Reset (LVR)
- Key Response Time:
  - Normal Mode 48mS
  - Standby Mode 160mS
- AHLB pin selects the output level on power-on: level- high or level- low
- TOG pin selects the output mode: Direct output or Latch output
- Output 2-bit BCD + Touch status indicator pin (OUTFLAG)
- Single key output, First touch first output
- Maximum key on duration time : 13S
- Sensitivity adjustment using an external capacitor(1-47nF) on CS pin
- Add a capacitor (0-50pF) to a touch key pin can fine tune the sensitivity for single key
- After power-on have about 0.3S stable-time, during the time do not touch the key .
- Auto-calibration Function
- Anti-voltage fluctuation, High anti-interference
- Package
  - SOP16(150mil)(9.9mm x 3.9mm PP=1.27mm)
  - QFN16L(3.0mm x 3.0mm PP=0.5mm)

## 1 General Description

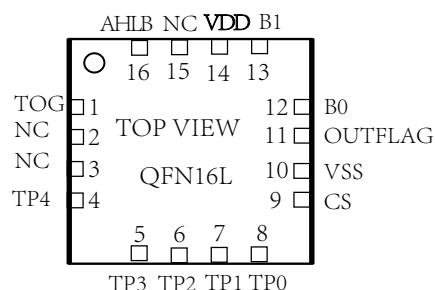

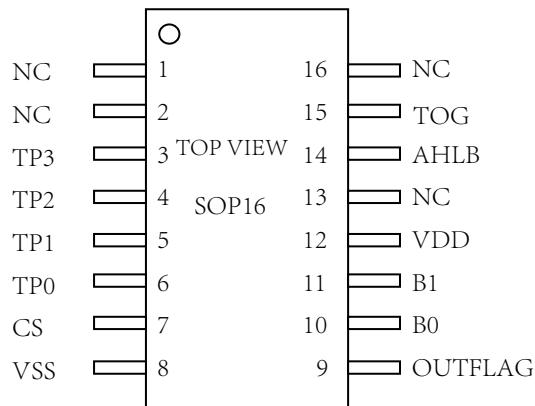

VK36N4B is a touch pad detector IC which offers 4 touch keys, It can detect human body contact using external touch pads. The high level of device integration enable applications to be implemented with a minimum number of external components.

It Provides 2-bit BCD code output function, 1 touch status output pin. The power-on output level, output mode can be selected through IO pin. Special internal circuitry is also employed to ensure excellent power noise rejection to reduce the possibility of false detections, increasing the touch switch application reliability under adverse environmental conditions.

With auto-calibration, low standby current, excellent resistance to voltage fluctuation and other features, this range of touch key devices provide a simple and effective means of implementing touch key + BCD code output operations in a wide variety of applications.

## 2 Pinouts and pin description

### 2.1 VK36N4B SOP16/QFN16L Pin Assignment

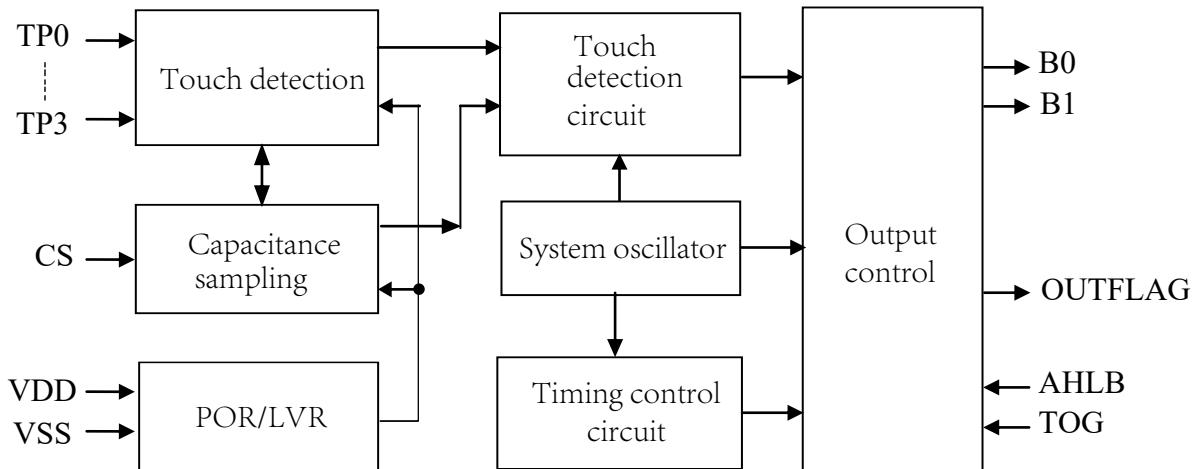

## 2.2 VK36N4B SOP16/QFN16L Pin Description

| Pin name  |            | I/O | Function Description   |
|-----------|------------|-----|--|
| SOP16     | QFN16L     |     |  |
| 1-NC      | 3-NC       | —   | Not Connect  |
| 2-NC      | 4-NC       | —   | Not Connect  |
| 3-TP3     | 5-TP3      | IN  | Touch key input pin, Add a capacitor (0-50pF) to a touch key pin can fine tune the sensitivity |
| 4-TP2     | 6-TP2      | IN  | Touch key input pin, Add a capacitor (0-50pF) to a touch key pin can fine tune the sensitivity |
| 5-TP1     | 7-TP1      | IN  | Touch key input pin, Add a capacitor (0-50pF) to a touch key pin can fine tune the sensitivity |
| 6-TP0     | 8-TP0      | IN  | Touch key input pin, Add a capacitor (0-50pF) to a touch key pin can fine tune the sensitivity |
| 7-CS      | 9-CS       | IN  | Capacitance detection, the larger the capacitance the higher the sensitivity(1-47nF)           |
| 8-VSS     | 10-VSS     | VSS | Negative power supply  |
| 9-OUTFLAG | 11-OUTFLAG | OUT | Touch status output pin  |
| 10-B0     | 12-B0      | OUT | Touch key output pin   |
| 11-B1     | 13-B1      | OUT | Touch key output pin   |
| 12-VDD    | 14-VDD     | VDD | Positive power supply  |
| 13-NC     | 15-NC      | —   | Not Connect  |
| 14-AHLB   | 16-AHLB    | IN  | Selects the output level: floating->Active level- low, VSS->Active level- high                 |
| 15-TOG    | 1-TOG      | IN  | Selects the output mode: floating->Direct output, VSS->Latch output                            |
| 16-NC     | 2-NC       | IN  | Not Connect  |

## 3 Functional Description

### 3.1 Block diagram

### 3.2 Auto-calibration Function

After power-on, the chip will be initialized to obtain the first reference value, If there is no touch, the chip will automatically calibrate the reference value, so that the reference value can be dynamically changed according to the external environment.

For example, reliable touch detection can be achieved through this mechanism when temperature changes or when there is environmental noise.

### 3.3 Max Key On Duration Time

To minimise the possibility of unintentional switch detections, such as undesired objects covering the sensing electrodes, the devices include a Maximum Key On duration time function. To implement this function the devices include an internal timer, which starts running after each switch detection. If the key on time of a touch key exceeds a value of about 13S, then the device will re-calibrate the key state, obtain a new reference value, while the output status is reset to the initial state.

### 3.4 Anti-Voltage Fluctuation

The chip has a built-in anti-voltage fluctuation function, which can prevent the touch button from malfunctioning caused by the external high current drive and the instantaneous drop of the working voltage.

### 3.5 Output mode

CMOS Direct output (B0~B1), AHLB pin selects the output level on power-on, TOG pin selects the output mode.

OUTFLAG pin outputs touch status, When there is a touch, the output level changes, and the output level without touch returns to the power-on state.

| AHLB | Output Function                      |
|------|--------------------------------------|
| NC   | active level- low,Power-on output 1  |
| VSS  | active level- high,Power-on output 0 |

| TOG | Output mode   |
|-----|---------------|
| NC  | Direct output |
| VSS | Latch output  |

Data Format: OUTFLAG+2 bit BCD code key value.

| AHLB NC ON POWER-ON |          |        |         |             |          |        |         |
|---------------------|----------|--------|---------|-------------|----------|--------|---------|
| Touch pin           | BCD code |        | OUTFLAG | Touch pin   | BCD code |        | OUTFLAG |
|                     | TOG=VSS  | TOG NC |         |             | TOG=VSS  | TOG NC |         |
| TP0 Touch           | 00       | 00     | 0       | TP0 Release | 00       | 11     | 1       |
| TP1 Touch           | 01       | 01     | 0       | TP1 Release | 01       | 11     | 1       |
| TP2 Touch           | 10       | 10     | 0       | TP2 Release | 10       | 11     | 1       |
| TP3 Touch           | 11       | 11     | 0       | TP3 Release | 11       | 11     | 1       |

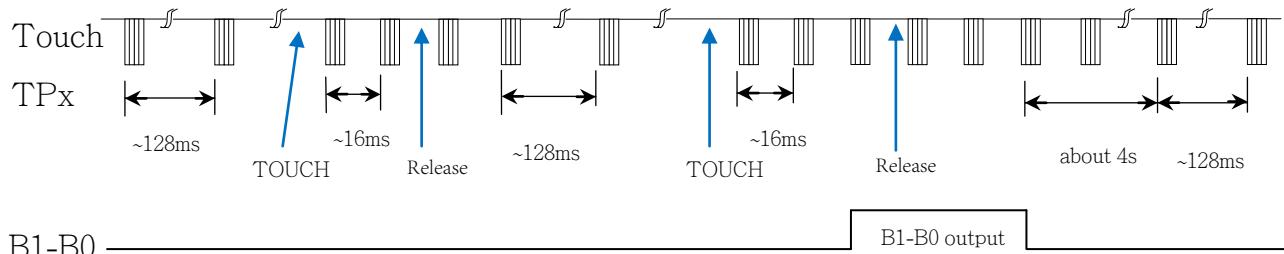

Note: Output pin level when power on BCD=11 OUTFLAG=1

| AHLB Connect VSS ON POWER-ON |          |        |         |             |          |        |         |
|------------------------------|----------|--------|---------|-------------|----------|--------|---------|
| Touch pin                    | BCD code |        | OUTFLAG | Touch pin   | BCD code |        | OUTFLAG |
|                              | TOG=VSS  | TOG NC |         |             | TOG=VSS  | TOG NC |         |

| TP1 Touch                    | 10       | 10     | 1       | TP1 Release | 10       | 00     | 0       |
| TP2 Touch                    | 01       | 01     | 1       | TP2 Release | 01       | 00     | 0       |
| TP3 Touch                    | 00       | 00     | 1       | TP3 Release | 00       | 00     | 0       |

Note: Output pin level when power on BCD=00 OUTFLAG=0

### 3.6 Operating Mode

There are two operating modes for VK36N4B, the normal mode and the standby mode. If any key is pressed, the device will be waken up and will then enter the normal mode .If no key press,After 4S, the system will then return to the standby mode again,it will be saving power. When VDD=5V ,at standby mode output response time is about 160ms, at detective mode output response time is about 48 ms.

### 3.7 Sensitivity Adjustment

The touch PAD size and capacitance of connecting line on PCB can affect the sensitivity. The sensitivity adjustment must according to the practical application on PCB. The VK36N4B offers some methods for adjusting the sensitivity outside:

#### I. Touch PAD Size

Under other conditions are fixed. Using a larger Touch PAD size can increase sensitivity. Otherwise it can decrease sensitivity. But the touch PAD size must use in the effective scope.

#### II. Panel Thickness

Under other conditions are fixed. Using a thinner panel can increase sensitivity. Otherwise it can decrease sensitivity. But the panel thickness must be below the maximum value.

#### III. Value of CS

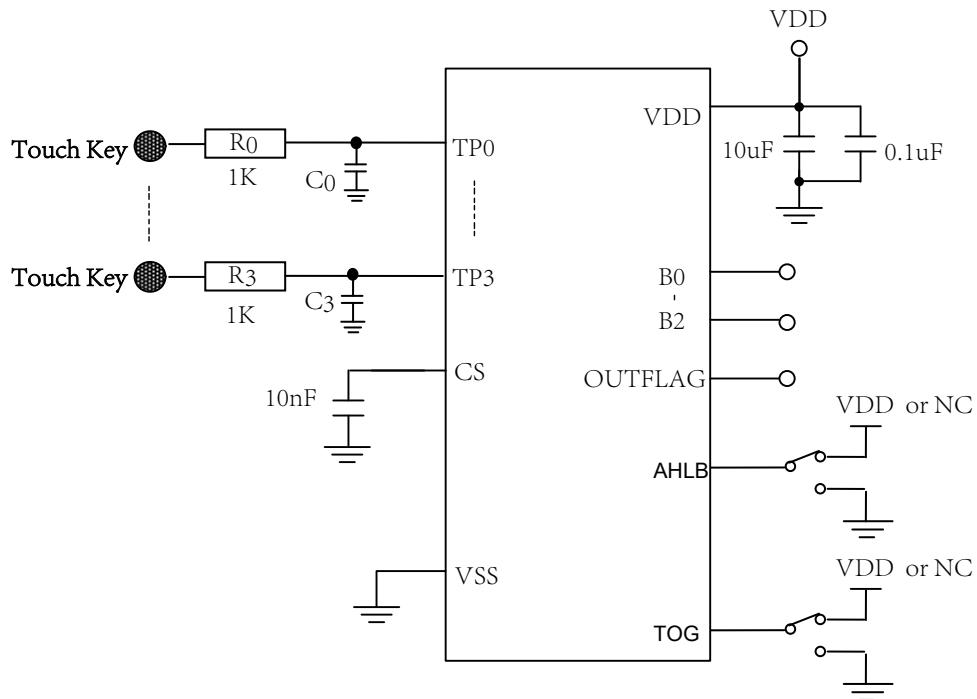

Under other conditions are fixed. CS pin to VSS capacitor Cs can adjust sensitivity, When adding the value of CS will increase sensitivity in the useful range (1nF-47nF) .

#### IV. Capacitor to a touch key pin

Add a capacitor (0-50pF) to a touch key can fine tune the sensitivity for single key,When adding the value of capacitor will decrease sensitivity .

| Panel Thickness (Acrylic or Glass) | CS value (only reference) |
|------------------------------------|---------------------------|
| <3mm                               | 6.8nF/25V                 |
| 3-6mm                              | 10nF/25V                  |
| 6-10mm                             | 22nF/25V                  |

## 4 Application Circuits

## 5 Electrical characteristics

### 5.1 Absolute Maximum Ratings

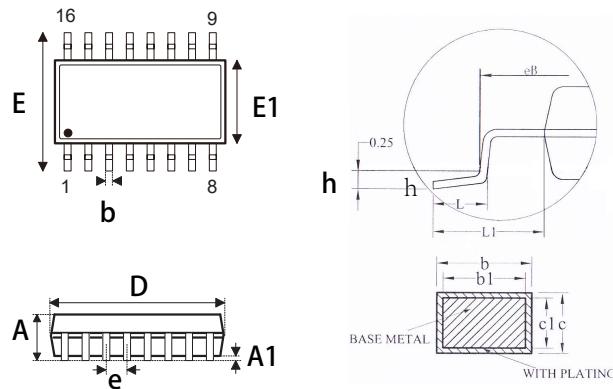

| Item                  | Symbol | Ratings           | Unit |
|-----------------------|--------|-------------------|------|
| Power voltage         | VDD    | -0.3~6.0          | V    |
| Input Voltage         | VIN    | VSS-0.3~VDD+0.3   | V    |
| Storage Temperature   | TSTG   | -50~+125          | C    |
| Operating Temperature | TOTG   | -40~+85           | C    |
| Human Body Mode       | ESD    | 4KV-8KV(Class 3A) | KV   |

### 5.2 DC Characteristics
