

## Features

- Operating voltage:2.4-5.5V
- Standby current:4uA/3.0V, 8uA/5V
- Power-On Reset (POR)
- Low Voltage Reset (LVR)
- Key Response Time
  - Normal Mode 48mS
  - Standby Mode 160mS
- CMOS-Direct Output
- AHLB pin selects the output level: Active level- high or Active level- low
- Auto-calibration Function
- Sensitivity adjustment using an external capacitor(1-47nF) on CS pin
- Add a capacitor (0-50pF) to a touch key pin can fine tune the sensitivity for single key
- After power-on have about 0.25S stable-time, during the time do not touch the key .
- Package:  
SOT23-6(3mm x 3mm PP=0.95mm)

## 1 General Description

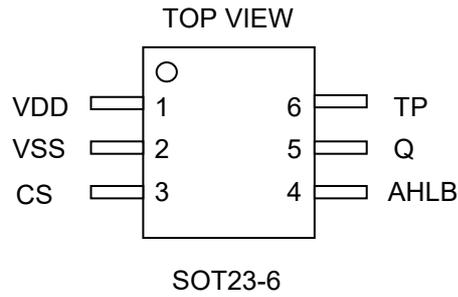

VK3601 is a touch pad detector IC which offers 1 touch key, It can detect human body contact using external touch pads. The high level of device integration enable applications to be implemented with a minimum number of external components.

It has 1 CMOS-Direct Output pin. Special internal circuitry is also employed to ensure excellent power noise rejection to reduce the possibility of false detections, increasing the touch switch application reliability under adverse environmental conditions.

With auto-calibration, low standby current, excellent resistance to voltage fluctuation and other features, this range of touch key devices provide a simple and effective means of implementing 1 touch key + IO operation in a wide variety of applications.

## 2 Pinouts and pin description

### 2.1 VK3601 SOT23-6 Pin Assignment

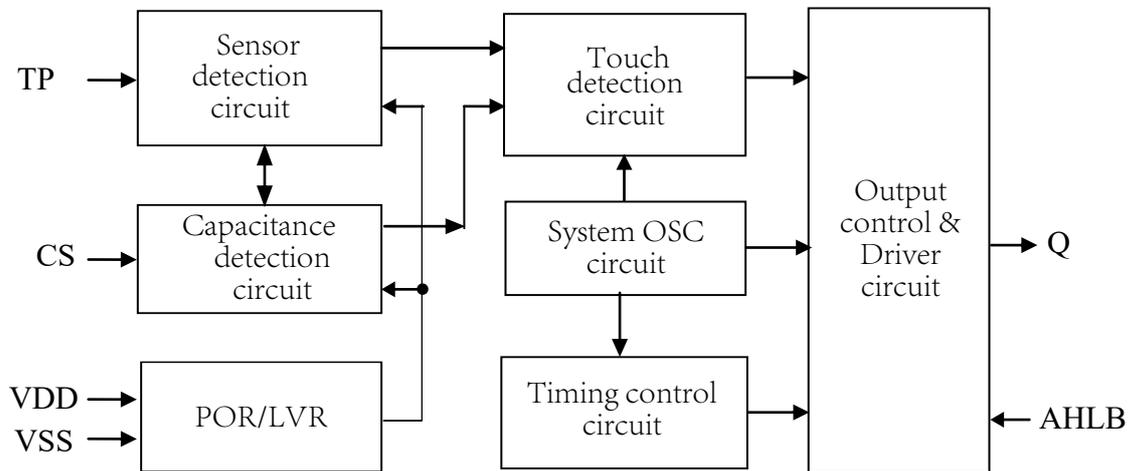

## 2.2 VK3601 SOT23-6 Pin Description

Pin No.	Pin name	I/O	Function Description
1	VDD	VDD	Positive power supply
2	VSS	VSS	Negative power supply
3	CS	IN	Capacitance detection,the larger the capacitance the higher the sensitivity(1-47nF)
4	AHLB	IN	built-in pull-up resistor, Selects the output level: 0->Active level- high 1->Active level- low (default)
5	Q	OUT	Touch key output pin
6	TP	IN	Touch key input pin

## 3 Functional Description

### 3.1 Block diagram

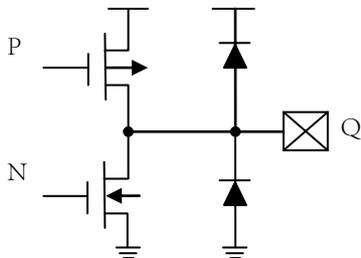

### 3.2 Auto-calibration Function

The re-calibration period is about 64 mS within 4S after power-on. Power on after 4S then it returns to standby mode, then the re-calibration period change to about 1S

### 3.3 Output mode

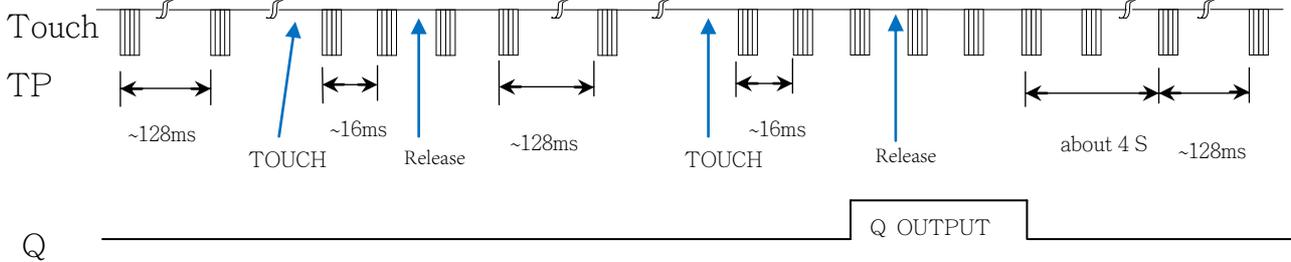

CMOS Direct output.

AHLB pin selects the output level: 0->Active level- high , 1-> Active level- low (default)

### 3.4 Operating Mode

There are two operating modes for VK3601, the normal mode and the standby mode. If the key is pressed, the device will be waken up and will then enter the normal mode. If no key press, After 4S, the system will then return to the standby mode, it will be saving power. VDD=5V at standby mode output response time about 132ms, at detective mode output response time about 48 ms.

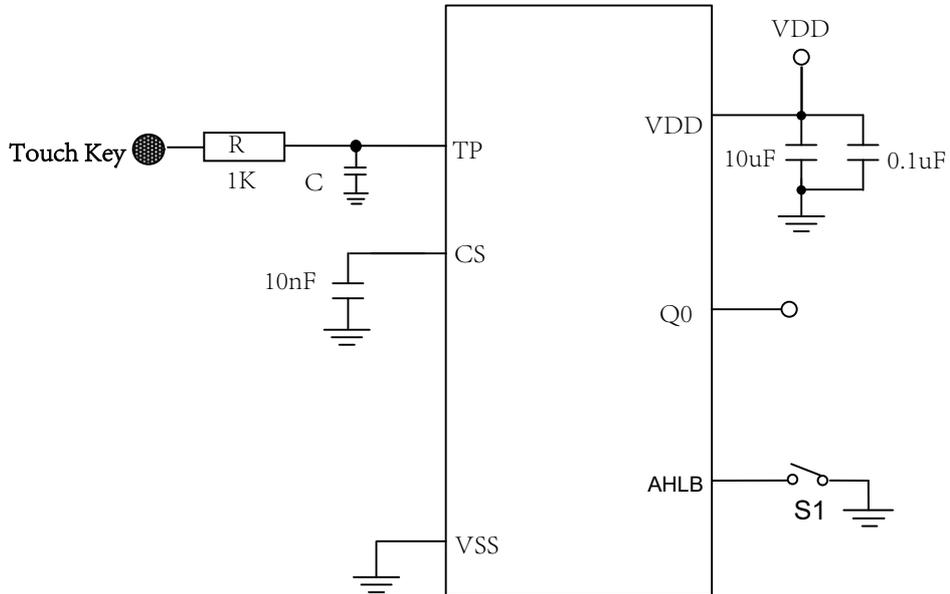

### 3.5 Sensitivity Adjustment

The touch PAD size and capacitance of connecting line on PCB can affect the sensitivity. The sensitivity adjustment must according to the practical application on PCB. The VK3601 offers some methods for adjusting the sensitivity outside:

- I. Touch PAD Size  
Under other conditions are fixed. Using a larger Touch PAD size can increase sensitivity. Otherwise it can decrease sensitivity. But the touch PAD size must use in the effective scope.
- II. Panel Thickness  
Under other conditions are fixed. Using a thinner panel can increase sensitivity. Otherwise it can decrease sensitivity. But the panel thickness must be below the maximum value.
- III. Value of CS  
Under other conditions are fixed. CS pin to VSS capacitor Cs can adjust sensitivity, When adding the value of CS will increase sensitivity in the useful range (1nF-47nF) .
- IV. Capacitor to a touch key pin  
Add a capacitor (0-50pF) to a touch key can fine tune the sensitivity for single key, When adding the value of capacitor will decrease sensitivity .

Panel Thickness (Acrylic or Glass)	CS value (only reference)
<3mm	6.8nF/25V
3-6mm	10nF/25V
6-10mm	22nF/25V
